

## **Ski Bromont implements the UMANA integrated human resources and payroll application**

**Montreal, Quebec (October 3, 2011)** – Carver Technologies today announced the rollout of the UMAN line of human resources management, time management and payroll packages at Ski Bromont.

Ski Bromont has over 1,000 employees and is recognized in the tourist industry as THE most popular four-season resort in Quebec with its ski products, evening skiing, water park and mountain biking. Last year, the resort's clientele increased about 6%. Nearly 800,000 skiers visit the mountain every winter. About \$50 million has been invested in Ski Bromont over the past 10 years.

The entire UMANA product line was deployed at Ski Bromont in the past few months. "The challenge was to obtain an integrated human resources management, time management and payroll solution that could be parameterized easily to respond to the working conditions of each group of employees. The complex rules regarding shifts, multiple schedules and different job descriptions were automated in Umana, eliminating the vast majority of manual interventions. This resulted in a quick return on investment," said Catherine Champigny, organizational development advisor at Ski Bromont and implementation project manager.
